

and remarks on this phenomenon in reference to the human kind. By A. Numan.—Geological and mineralogical notices on the Island of Borneo. By L. Hörner.—On the covering of the stigma in the *Scavolaceæ* and *Goodeniaceæ*. By P. W. Korthals.—Remarks on the gigantic Salamander of Japan. By J. Van der Hoeven. [Noticed at p. 413.]—The biforines of Turpin, a new discovery in the crystallography of the vegetable kingdom. By W. H. De Vries.—On *Lepidosiren paradoxa*. By J. Van der Hoeven. [A notice of this reptile was inserted in our last number at p. 309.]—Novæ species *Cycadearum* Africæ Australis, quas descriptionibus et figuris illustravit W. H. De Vries.

*Works in the Press.*

Dr. Robert Wight, Surgeon H. E. I. C. service, is preparing for publication an 'Icones Plantarum Indiæ Orientalis,' or Figures of Indian Plants described in Wight and Arnott's 'Prodromus Floræ Peninsulæ Ind. Or.,' and in Wight's 'Illustrations of Indian Botany,' now in the course of publication in India. This is to appear at Madras in monthly numbers, each containing ten lithographed uncoloured quarto plates, for one rupee or about one shilling and ninepence sterling. The grand object of this work may be summed up in a few words:—To give to India (so far as the limited resources of a private individual will permit) that which England has so long enjoyed in Smith's English Botany, a standard botanical work of reference, by the publication of correct figures of as many Indian plants as the author can accomplish, and in the shortest possible time. To reduce the price and increase the rapidity of publication, there will be no letter-press descriptions, but a simple reference to the 'Prodromus' by numbering the plates uniform with the running numbers of that work, except when new plants are introduced; and for the descriptions then necessary no additional charge will be made. The first number was expected to appear on the 1st of July.

*A History of the Fishes of Madeira.* By the Rev. R. T. Lowe.

With original figures from nature of all the species, by the Hon. C. E. C. Norton and Miss Young.

The materials for this undertaking are the result of several years' patient investigation and continued revisal on the spot. Several of the genera, and of the species more than one fourth part, are either new or have been hitherto imperfectly described. The figures will be all engraved and coloured by the same hands which, in co-operation with the author, have originally drawn them, a combination much in favour of their accuracy and correctness.
